MEDIA ALERT

Getac, Supplier of Rugged Computing Solutions for Over 25 Vehicle Brands, Presents Latest Innovations at Automechanika 2024

Visit hall 8.0 stand M82 to see why automotive customers all over the world are choosing Getac as their full service, premium provider.

TELFORD, 24 July 2024: Getac, a leading manufacturer of rugged computing solutions will present its latest technological developments for the automotive sector at Automechanika 2024, Frankfurt Germany. Getac will be showcasing the recently launched world's first AI-Ready rugged S510 laptop, as well as other brand new and innovative total solutions for increased productivity and efficiency in the sector.

Getac is a one stop provider of rugged laptops, tablets and software solutions, designed specifically for demanding automotive applications and already in use by more than 25 car brands worldwide as well as independent workshops. The latest, future-proof Getac models and software solutions support AI applications designed to increase productivity and efficiency: from vehicle diagnostics, technical look up, ADAS calibration and EVHC, to development and production or logistics, they provide a reliable, high-performance and fail-safe foundation for fast, stable processes, while reducing total cost of ownership and increase return on investment. Getac's rugged AI computing solutions reduce downtime, which translates into higher employee productivity and greater efficiency, perform on-site data analysis and processing, and provide real-time decision-making capabilities.

Russell Younghusband, Global Automotive Director at Getac comments: "Getac's leading role in the development of innovative and tailor-made solutions for customer integration helps to optimise the processes of automotive customers and improve client satisfaction. Getac supports the demanding sector with state-of-the-art, AI-Ready rugged computing solutions, supporting acceleration of digital transformation."

Getac rugged products are not only robust, reliable and powerful, but also future-proof and compatible with a wide range of dedicated accessories, peripherals and software that help users maximise device functionality in various automotive user groups, including aftersales repair and maintenance.

With the introduction of the latest AI-enabled rugged computing solutions, Getac is once again setting standards in the industry and continuing to position itself as a trusted partner of most leading OEMs. For questions about corporate strategy and rugged solutions, Getac's Team of Automotive Experts will be available at Getac's booth during Automechanika in Hall 8.0, stand M82.
