

PUBLIC SAFETY

More Security for Citizens: Local Police of Origgio and Uboldo (Italy) Relys on Rugged Solutions from Getac

Getac's rugged solutions for the digitalisation of public security activities enable more efficient service to the community and the territory

/ Challenge /

The Local Police of Origgio and Uboldo (Italy) performs its valuable service to the community on a daily basis. For some years now, it has been intensively digitising and modernising the complex and sensitive activities of land management, citizen and business security. With a view to completing digitisation activities for its officers in the field, the Municipal Police Headquarters needed to set up mobile offices.

/ Solution /

In order to choose the most suitable solution for the management and protection of the community and territory, the Local Police Command carried out an in-depth research of the options on the market. After careful evaluation, it opted for the solution proposed by C.I.E. TELEMATICA. The solution, designed ad hoc together with Getac's Solution Team, is based on Getac's F110 fully rugged tablet housed in a vehicle docking, a mounting kit with brackets and plates, vehicle power supply and Getac's rugged keyboard and stems from an awareness of the challenging scenarios and situations in which agents find themselves operating.

/ Benefits /

The agents immediately appreciated the solution, given its simple interaction with the tablet, its robustness and stability, its high-performance features and its versatility, thanks to its easy attachment and removal from the housing. In addition, with the set-up of a real mobile office, downtime was reduced, indications on the activities to be carried out, the compilation of documentation and reports are sent in real time, without having to return to the command to communicate the information, thus ensuring the optimisation of the presence on the ground. Since the introduction of the new mobile office solution, the police have carried out 173 more checks and ensured greater peace of mind for their citizens.

/ Local Police of Origgio and Uboldo (Italy) /

"The top priority for the Local Police is to keep watch and ensure peace of mind for the community. Thanks to the digitization and implementation of Getac's total solution, daily activities have been made more efficient and immediately received very positively by the officers."

Dr. Alfredo Pontiggia, Commander of the Local Police of Origgio and Uboldo (VA) - Italy.

Getac F110
Fully Rugged Tablet

/ Challenge /

The Local Police of Origgio and Uboldo (Italy) performs its valuable service to the community on a daily basis, covering an area of about 19 square kilometers, which includes 18438 inhabitants, about 135 companies, and 120 businesses, with many private and heavy vehicle entries of about 100,000 per day.

For some years, it has intensively digitized and modernized the complex and sensitive activities of land management, citizen, and business security.

Some time ago, it realized the importance of setting up a modern command and control station, choosing state-of-the-art technology, and using communication and video surveillance infrastructures for a much more efficient action on the territory.

To complete digitization activities for its officers in the field, the Municipal Police Headquarters needed to set up mobile offices.

/ Solution /

In order to choose the most suitable solution for the management and protection of the community and territory, the Local Police Command carried out an in-depth research of the options on the market. After careful evaluation, it opted for the solution proposed by C.I.E. TELEMATICA, a company specialising in providing networking solutions and integrations for over 30 years. The solution, designed ad hoc together with Getac's Solution Team, is based on Getac's F110 fully rugged tablet, housed in Havis's vehicle docking specifically designed for in-vehicle use, along with a mounting kit solution, vehicle power supply and Getac's rugged keyboard. The study

and analysis of the bespoke set-up design was carried out in concert and specifically developed for the service vehicle set-up, in order to provide a safe and efficient, ergonomic solution with a footprint congruent with the movement and comfort of the officers in the field.

C.I.E. TELEMATICA's decision to propose a total Getac solution based on the fully rugged F110 tablet stems from an awareness of the challenging scenarios and situations in which agents find themselves operating. These include the need to consult programmes, write reports and documentation, and compile reports in very often critical situations, with adverse weather conditions, temperature fluctuations, rain, sun, and high alert conditions. The large 11.6 screen, readable in all light conditions, even in direct sunlight, and usable with finger, stylus or gloves, has an ideal form factor and technical characteristics. In addition to the robustness of the tablet, which is MIL-STD-810H certified for vibration and shock, it was important to choose a vehicle docking device certified for use in vehicles. Also crucial for field operations is the ability to quickly release the tablet from the docking station, even with one hand, and take it out of the car, with ease and speed.

/ Benefits /

With the adoption of Getac's total solution, the Local Police can now use a true mobile office; officers in the field can operate even faster and more efficiently, keeping their focus on the valuable task of managing, preventing and securing the territory and the community, without having to think about taking care of the IT tool.

The agents immediately appreciated the solution, given its simple interaction with the

tablet, its robustness and stability, its high-performance features and its versatility, thanks to its easy attachment and removal from the housing.

In addition, with the set-up of a real mobile office, downtime was reduced, indications on the activities to be carried out, the compilation of documentation and reports are sent in real time, without having to return to the command to communicate the information, thus ensuring the optimisation of the presence on the ground.

This territorial presence, responsiveness and reduction of downtime are essential for the valuable work of the Local Police, which includes, among other things, crime prevention operations in cooperation with other police forces, judicial police functions, road safety checks, traffic management, and accident intervention.

Since the introduction of the new mobile office solution, the police have carried out 173 more checks and ensured greater peace of mind for their citizens.

/ About C.I.E. TELEMATICA /

C.I.E. TELEMATICA is a capital company active in the telecommunications market nationwide, offering system integration services and networking, data security and IT solutions.
