# VOGO

The international sportech has chosen GETAC F110 tablets for its video analysis and decision-making tools.

## / Challenge /

VOGO is an international sportech, founded in 2013, specialising in audio and video solutions dedicated to sport and now also adapted to industry and the audiovisual sector. In the sports market, VOGO is a leading international player offering sports federations and clubs analysis and decision-making tools (refereeing assistance, medical diagnosis, coaching, performance enhancement). VOGO had previously been using another supplier's tablets to deploy these video solutions. But the teams were looking for higher-performance alternatives with improved screen visibility, longer battery life and maximum resistance to weather conditions for use around sports grounds, particularly outdoors.

## / Solution /

After carrying out a number of tests, the VOGO technical team opted for Getac tablets, and more specifically the F110 model. Combining performance, ergonomics and robustness, the Getac tablets proved to be the perfect tool for relaying VOGO's video solutions. But it was above all the quality and responsiveness of the shock- and reflection-proof touch screen, the extensive connectivity (wired, WiFi, 4G/5G) and the long battery life that were decisive in the choice of this model.

## / Advantages /

By using the Getac F110 tablet, VOGO was able to benefit from improved screen visibility and flawless tactile behaviour, even in the rain. Thanks to the long-life batteries, autonomy is no longer a problem, making training or refereeing more fluid. The combination of performance and ease of use and set-up means that the system can be used flexibly in a variety of ways. What's more, like all Getac devices, the F110 tablets come with a comprehensive range of accessories and an after-sales service that ensures the tablet is never out of action and allows continuous activity.

## / VOGO /

« GETAC tablets are the ideal video viewing tool; whether referees, doctors, trainers or video analysts, they need a robust tool at the edge of the pitch that allows them to view and manipulate video streams instantly and ergonomically. GETAC screens are particularly appreciated for their anti-glare function and the responsiveness of the touch function, even when it's raining. Long-lasting batteries are also very useful for sports events lasting several hours or days.»

Barbara Desmarest-Moser, VP Marketing, Communication & Fan Solutions.

Getac F110

## / Challenge /

In the sports market, a number of professions need VOGO's video solutions to ensure the success of their sporting events and field missions. Whether referees, doctors, coaches, trainers or video analysts, they all need state-of-the-art equipment that adapts to their working environment and ensures optimum results.

For example, judges at BMX competitions need to be able to consult the F110 tablet in the sun or rain, gymnastics judges work in an environment where chalk is omnipresent, and swimming coaches need to consult the tablet at the poolside. All these concrete cases demonstrate a real need for resistance and flexibility.

## / Solution /

By choosing Getac solutions, the VOGO teams can offer complete video systems, and in particular rely on an easy-to-use rugged tablet with the dedicated docking station from Brodit that meets their various needs. The F110 tablet allows referees to centralise on one device live access to all angles of action on the pitch. The variety of network connection modes (wired, wireless, 4G/5G) is a big plus. This gives referees the ability to make quick, autonomous decisions, for example during a handball match in France, or even for individual sports such as gymnastics or skiing.

Using Getac tablets has also enabled doctors, particularly in rugby and in line with World Rugby recommendations, to optimise the concussion protocol and analyse the impact, which can be very violent. The match doctor is equipped with a Getac tablet and the VOGO video replay system to analyse how the player was hit and how he reacts after suffering the shock.

Finally, sports coaches and trainers can use the tablet live to improve a sportsperson's performance in terms of position, tactics or game construction. The F110's versatility also ensures that decisions are made wisely and in line with the progress of the match or event. Of course, these different uses can be combined for even greater performance and flexibility.

"Following the excellent feedback from our users, VOGO is already planning other projects with Getac," says Barbara Desmaret-Moser.

## / Advantages /

Thanks to the robustness and ergonomics of the F110 tablets, VOGO is able to meet the video equipment needs of an increasing number of sports and respond to their specific requirements. The durability of the products is also a significant advantage. The quality of the design and the latest components ensure high performance and cutting-edge connectivity, guaranteeing optimum, rational use of the tablets and reducing the need for replacement.

Finally, with a 3-year Bumper to Bumper warranty covering accidental damage, VOGO ensures peace of mind for years to come.

## / ABOUT VOGO /

In the world of sport, VOGO is a leading international player in audio and video solutions for spectators and professionals. For professionals, VOGO offers analysis and decision-making tools (refereeing assistance, medical diagnosis, coaching). For spectators, VOGO has developed a ground-breaking solution, independent of the number of people connected, enabling the stadium experience to be transformed through multi-camera content on demand, accessible via tablets or smartphones. VOGO is now also present in the industrial sector. All the Group's technologies are protected by a portfolio of patents. VOGO is based in France (Montpellier, Grenoble and Paris) and has 2 subsidiaries in North America and the United Kingdom.
